CSF Oligoclonal Bands

Accreditation Status: UKAS Schedule of Accreditation

Date Scheme started: 1996

Clinical Applicability: Diagnosis of multiple sclerosis

Analytes: CSF IgG Oligoclonal Bands (SER/015)

Units for Reporting: Presence or absence of IgG oligoclonal banding in the CSF sample and the pattern

type

Samples Distributed: Liquid format. Normal and pathological human cerebrospinal fluid, with

a paired serum sample

The concentration of IgG in the CSF and serum sample will be predetermined and this information will be included with the distribution to allow the appropriate

dilution of the samples

Number of Distributions per year: 6

Number of Samples per Distribution: 2 (1 x CSF and 1 x serum pair)

Frequency of Distributions: Every two months as outlined in the Distribution Schedule

Schedule of Analysis: Data entry is via the web for the submission of results. Data analysis

is commenced 21 days after sample dispatch. Late returns are accepted and will

contribute to the laboratory's cumulative performance statistics

Data Analysis: Qualitative responses and pattern type are assessed by MI scoring in

relation to the designated response

Performance Scoring: MI scoring

Criteria of Performance: Laboratory performance is assessed over a running analytical window of 6

Distributions (12 months)

The categories of performance are:

Good zero
Adequate 1-2
Poor >2

Persistent Poor Performance: Defined as being in the Poor Performance category for two or more

successive Distributions
